PROJECTS

Teatro | https://github.com/ayadalshaikhli/Teatro | | https://tea-tro.netlify.app/
Description: A site for educational and instructive purposes to retrieve movie data and details. Investigate and critically analyze your own movie sites and query.
- Front-end and Back-end Developer - Collaborated with a team of four developers in all phases of the development life cycle, focusing on coding, testing, and debugging.
- Completed web application in less than 2 weeks collaborating 100% remotely using Zoom and Slack.
- Guided team by establishing a plan for good workflow and debugging technical problems
- Access data from web APIs and integrated it into the web application according to specifications
- Tools: React, Express, MongoDB, Axios, Heroku, Puppeteer, TMDB API, YouTube API, GLQ, and Gsap.

Tataroski | https://github.com/ayadalshaikhli/tataroskiupdate || https://tataroski.com/
Shopify Ecommerce to sell jewelry using dropshipping with aliexpress
- Role: Sole author, Front-End Development, Web Design
- Independently worked across all phases of the development lifecycle to complete the application in one week
- Web-based application that is mobile responsive and utilizing reusable components
- Thorough Documentation of all code changes through appropriate change control (Github)
- Utilized Puppeteer to scrape data and access web APIs, which were then integrated into the web application according to specifications.
- Tools: Shopify, NextJS, Three.js, Tailwind, Photoshop, GSAP, Blender

UberEats | https://github.com/ayadalshaikhli/UberEatUser
I developed an UberEats Clone React Native app, consisting of three applications that work together seamlessly.
- The UberEatsUser app allows users to browse restaurants and add items to their cart, while UberEatsCourier provides real-time updates for drivers. The Uber Eats Restaurant Dashboard is a back-end website for restaurant owners to manage their menu.
- The project was developed using Expo, React Native, Google Maps, Next.js, and AWS Amplify..
- I worked independently on the Uber Clone React Native app, handling all aspects of design, development, and deployment.
- Tools: Expo, React Native, Javascript, Google Maps Api, HTML, CSS, NextJs,

Tech2u   May 2022- Current Roseville, CA

Position : *Full Stack Web Developer*

- Collaborated with the OpenAI Api to create multiple models for searching the database and transcribing tech phone calls to monitor phone calls and get short info off the phone call, flagging any unwanted words that were said during the call.
- Created a React Native app that integrates with the Stripe Terminal SDK to accept in-person credit card payments via Bluetooth connected card readers.
- Worked on AWS EC2 and RDS, as well as AWS Amplify for Android apps, to deploy, manage, and scale applications in the cloud.
- Developed a React Native mobile app for RAD Radio using Firebase for authentication and vimeo for video live streaming
- Managed the design and development of Sircles, a React Native application, which included developing a comprehensive incentive system in PHP to assist consumers in redeeming codes ecommerce website.
- Created a comprehensive back-end admin system utilizing Graphql and Reactjs with Firebase.
- A simple and well-organized website was made utilizing Php and MySql to manage all of the fulfillment operations, along with three Shopify private applications to manage shipping using the Stamps.com Api.
- Created a website utilizing the SquareUp Api to handle appointments and payments for local businesses. https://booking.fireup.gg/.
